-------------------	----------

## 1 Introduction

- 1.1 This tree inspection report and management plan has been prepared to meet the requirements to provide tree management planning for the MOD estate.

## 2 The Brief

- 2.1 On instruction received from the client, the brief was to inspect trees and to provide a tree management plan for the site, including tree and woodland description, brief description of the areas involved, objects of management, overall strategy for achieving the objects, and a five year plan of operations with year by year listings of works required.

## 3 The Methodology

- 3.1 The survey was carried out in August/September 2005 by Neil Smith, from PBA Consulting.
- 3.2 The previous tree survey, completed in June 1998, was reviewed. Due to the length of time since the survey was completed and poor definition of the position of the trees, it was not possible to comment on whether the recommended works had been carried out. However, the overall condition of the trees on site was good.
- 3.3 All tree survey work was conducted from ground level. No testing was carried out to either trees or soil.
- 3.4 A thorough inspection of all trees was carried out at the time of the survey and data collected in accord with BS 7370: Part 1: 1991 – Appendix C. In addition, PBA carried out a health and safety risk assessment. Appendix 5 shows the methodology.
- 3.5 All trees and woodlands of high amenity and or landscape value, that are located within falling distance of buildings, roads, footpaths, and any other places where people have ready access, have been included.
- 3.6 The fixing of a unique plastic numbered tag shall identify all trees, or cohesive group or line of trees, over 250mm circumference. All old tags from previous surveys were removed to avoid confusion. No staked trees were included in this inspection.
- 3.7 The location of the trees was recorded electronically using GPS on a GIS site plan provided processed from Ordnance Survey NTF maps.
- 3.8 Contact was kept with the local office to advise on locations of areas to be surveyed the following day.

- 3.9 The weather at time of inspection was mainly warm and dry, and visibility was good throughout.
- 3.10 Each survey report is checked for quality by an independent member of PBA Consulting.

### **4 Site Description**

- 4.1 The site covers a large area including; college areas, laboratories, ranges, a golf course and large house and grounds. Several smaller areas exist to the west and north of the site. The main site is located off the main road. The site is divided by the brook. The land on either side gently falls towards the brook. There are residential areas to the north and west of the main site.
- 4.2 There is a large stock of well maintained amenity trees, both as individual specimens, and as smaller groups.
- 4.3 There are extensive areas of woodland to the north-west and south-west of the site containing stock species such as beech, ash, poplar and conifer.

### **5 Objects Of Management**

#### **Amenity Trees**

- 5.1 The management objective is to maintain and enhance the tree stock as a safe and enjoyable amenity, retaining its character which will ensure the continuity of tree cover and contribute to the landscape of the area.

#### **The Woodlands**

- 5.2 The amenity woodlands are to be managed to retain and enhance their character, contributing to wildlife conservation, the amenity and the landscape of the area.

### **6 Strategy**

#### **Amenity Trees**

- 6.1 There is a wide range of trees from young to over mature in age. Many are British natives and have high amenity and conservation value. Several cherries, whitebeam and other species are over-maturing and coming to the end of their useful life. A programme of felling dead and dying trees and replanting is proposed to retain the existing treescape.

#### **The Woodlands**

- 6.2 The woods are mostly semi-mature to mature and have high amenity and conservation value. The high stocking density figures in some areas reveal that they are deteriorating. A phased programme of thinning works should be developed to maintain the quality of trees and ensure development to maturity.

### 7 Amenity Trees – Survey Report

- 7.1 The full inspection included condition, age, nearby features, condition of roots, stem, branches, risk assessment and any remedial action required and a guide to cost.

#### Amenity Trees - Summary

- 7.2 The majority of the individual trees inspected were in good condition.
- 7.3 A complete schedule of trees inspected is given at Appendix 1.
- 7.4 A table of recommended tree work is given in paragraph 7.9. This should be in addition to normal maintenance work such as removal of epicormic growth, lifting of canopy away from signs and streetlights which should be specified in the grounds maintenance contract.
- 7.5 Only one tree has been highlighted as requiring immediate (category A1) attention. Details of this lime tree were passed on verbally to the client.
- 7.6 Ninety-three trees have been reported as requiring non-urgent attention and have been placed in the B1 maintenance category. Most of the works required are felling dead trees, felling diseased trees, raising or pruning of crowns and removal of deadwood.
- 7.7 Forty trees have been identified as requiring monitoring. This is because some features, such as fungus or decay, weak forks or bark wounds may develop into hazards over time. Such trees should be re-inspected at intervals of not more than twelve months.
- 7.8 The horse chestnut trees along the boundary between 73/4 car park and the golf course are showing evidence of *phytophthora* bleeding canker disease. Several losses may occur in the near future. It is proposed that a programme of felling the worst specimens and replanting to retain the existing treescape be implemented.

## Tree Inspection Report and Management Plan

### 7.9 Table of Recommendations for Tree Work

Tree/ Group No.	Species	Location	Recommendations	Maintenance Category	Estimated cost [£]
1094	Lime	Near road	Fell	A1	600
28	Thorn	Free standing	Fell	B1	150
29	Thorn	Free standing	Fell	B1	150
31	Oak	Near road	Fell	B1	100
52	Chestnut	Near road	Fell	B1	50
66	Willow	Free standing	Crown reduce by 30-40%	B1	300
67	Willow	Free standing	Fell	B1	150
104	Chestnut	Near buildings	Fell	B1	500
113	Apple	Near buildings	Fell	B1	100
255, 256, 257	Cherries	Free standing	Fell	B1	250
272	Cherry	Free standing	Fell	B1	150
282	Cherry	By road	Clear fallen limb	B1	50
290	Beech	By road	Remove deadwood	B1	100
297	Ash	By road	Crown lift to 3m	B1	50
300	Beech	By road	Crown lift to 3m	B1	50
303	Plane	By road	Remove deadwood	B1	50
304	Plane	By road	Crown lift to 3-4m	B1	50
305	Plane	By road	Crown lift to 4-5m	B1	100
316	Plane	By road	Crown lift to 4-5m	B1	50
317	Plane	By road	Crown lift to 4-5m	B1	75
319	Lime	By road	Crown lift to 4-5m	B1	50
322	Lime	By road	Crown lift to 4m	B1	50
323	Lime	By road	Crown lift to 4m	B1	50
378	Plane	By road	Crown lift to 3-4m	B1	50
420	Willow	By road	Remove deadwood	B1	100
463	Elm	By road	Fell one by road	B1	100
526	Willow	By road	Coppice group to 1m	B1	200

## Tree Inspection Report and Management Plan

Tree/ Group No.	Species	Location	Recommendations	Maintenance Category	Estimated cost [£]
544	Elm	By road	Fell 5 trees	B1	300
545	Elm	By road	Fell	B1	100
547	Poplar	By road	Fell	B1	300
548	Poplar	By road	Remove deadwood	B1	200
553	Beech	By road	Fell	B1	100
562	Thorn	By path	Fell	B1	100
591	Poplar	By road	Remove north facing branch	B1	50
604	Birch	Free standing	Fell	B1	200
629	Thorn	Near Buildings	Crown lift over building by 2m	B1	75
718	Cherry	Free standing	Remove sucker growth	B1	30
788, 789, 791, 795	Ash	In car park and adjacent to road	Fell	B1	1000
792, 794	Oak	By road	Fell	B1	500
796, 799	Beech	By road/car park	Fell	B1	250
810	Sycamore	By road	Fell	B1	300
812	Pine	By road	Fell	B1	500
813	Maple	Free standing	Fell	B1	200
849	Sweet Chestnut	By buildings	Crown reduce by 20% and remove deadwood	B1	400
842, 843 845, 850 to 852	Ash	By buildings	Crown reduce by 30-40%	B1	1500
853	Ash	By road	Fell	B1	300
909	Cherry	By buildings	Fell	B1	200
936	Cherry	In Car park	Deadwood	B1	100
937, 945	Thorn	In Car park	Fell	B1	200
944	Cherry	By buildings	Fell	B1	150
989, 992,997	Horse Chestnuts	In car park	Fell	B1	2400

## Tree Inspection Report and Management Plan

Tree/ Group No.	Species	Location	Recommendations	Maintenance Category	Estimated cost [£]
1068	Oak	Near Buildings	Deadwood	B1	200
1079	Alder	By road	Crown lift to 3-4m	B1	50
1103/4	Willow	By road	Crown reduce/pollard to 3-4m	B1	1000
1108	Plane	Free standing	Pollard to fork	B1	200
1141	Walnut	By road	Fell	B1	400
1142	Elm	By road	Fell	B1	50
1145	Oak	On Golf course	Fell	B1	500
1149 to 1153	Poplar	By path/houses	Crown reduce by 30-40%	B1	1500
1154	Poplar	By houses	Fell	B1	700
1156	Birch	Free standing	Fell	B1	250
1163	Elms	Free standing	Fell 5 elms	B1	300
1164	Beech	Free standing	Fell	B1	300
1174	Elms	Free standing	Fell 9-11 elms	B1	500
1216	Willow	Free standing	Fell	B1	200
1240	Oak	By buildings	Fell	B1	300
1244	Willow	Free standing	Fell	B1	500
1246	Oak	Free standing	Fell	B1	400
1247	Oak	Free standing	Remove deadwood	B1	200
1356	Rowan	By buildings	Fell	B1	200
1435	Willow	Free standing	Pollard	B1	50
1438	Willow	Free standing	Fell	B1	150
1501 1502	Lime	By road/buildings	Crown lift to 3m	B1	50
1506	Plane	By road	Fell	B1	250
1510 to 1512	Plane	By road	Crown lift to 5m	B1	250
				<b>Total</b>	<b>£21630</b>

### Amenity Trees- Detailed Findings

- 7.10 Tree No. 1094 is a lime tree at the entry gate to Becketts House. It is significantly decayed and in poor condition. Details were given to the client to have this tree felled within 2 weeks.
- 7.11 Tree No. 104 is a large horse chestnut situated very close to a block of flats. It is twin stemmed and in fair condition. However, structurally it appears poor and it is likely that failure of part of the tree may occur in the near future. Due to its location, it should be regarded as a medium to high risk and it is recommended that it be felled to ground level within 6 months.
- 7.12 Tree No. 1506 is a plane tree which has a significant crack in the stem. It should be considered a medium to high risk and be felled within 3 months.
- 7.13 Tree Nos. 997, 989, and 992 are horse chestnuts along the boundary to the golf club in car park 97/4. They are in poor condition suffering from *Phytophthora* bleeding canker and there is significant deadwood within the crowns. The bark is also dying and cracking. These should be considered a medium risk and felled within 6 months and replanted.
- 7.14 Tree Nos. 1103/4 are near the lodge and the main highway. They are very large and decay is evident within the stem. It is recommended that they be pollarded to 3-4m. These should be considered a medium risk and work carried out within 6 months.
- 7.15 Tree Nos. 66, 842, 843, 845, 850-852, 1108, 1149-1153, 1453 are trees that have become very large and, for structural and safety reasons, require reducing in size either by reducing or pollarding work. These should be considered a medium risk and work carried out within 6 months.
- 7.16 Tree Nos. 52, 67, 853, 944, 1141, 1154, 1156, are trees in poor condition with significant decay and should be considered a medium to high risk and be felled within 3 months.
- 7.17 Tree Nos. 290, 303, 420, 548, 936, 1068, 1247 have deadwood or fractured branches, which if left could fall. Of low to medium risk, work should be carried out within 12 months.
- 7.18 Tree Nos. (and small groups) 28, 29, 31, 113, 255, 256, 257, 272, 463, 544, 545, 547, 604, 788, 789, 791, 792, 794, 795, 796, 799, 810, 812, 813, 853, 909, 937, 945, 1142, 1145, 1156, 1163, 1164, 1174, 1216, 1240, 1244, 1246, 1356, 1438, 1506 are dead and require removal and replanting. Of low to medium risk, work should be carried out within 12 months.
- 7.19 Tree Nos. 297, 300, 304, 305, 316, 317, 319, 322, 323, 378, 629, 1079, 1501, 1502, 1510, 1511, 1512 have spreading low crowns and overhang either roads, paths or properties. Of low risk, work should be carried out within 12

months.

- 7.20 Tree No. 718 has sucker growth which requires removal. Of low risk, work should be carried out within 12 months. This should be included in routine maintenance.
- 7.21 50 trees have been identified as requiring monitoring (Nos. 21,164,303, 364,399, 616, 674, 680, 696, 698, 820, 821, 871, 904, 976, 987-1010, 1088, 1091, 1097, 1098, 1120, 1121, 1132, 1152, 1197, 1232, 1436). This is because of some feature, such as fungus or decay, weak forks or bark wounds, may develop into hazards with time. Considered of low risk hazards at present, these trees should be re-inspected every 6 months.

### **Amenity Trees – Recommendations**

- 7.22 One tree is categorised as A1 and requires immediate attention (no.1094).
- 7.23 It is recommended that remedial work be undertaken to the trees as described in the detailed findings within 3, 6 or 12 months as appropriate.
- 7.24 Trees that have been identified as requiring monitoring should be re-inspected after adverse weather conditions, or at 6 monthly intervals by a qualified arboriculturalist.
- 7.25 An annual safety inspection of the trees should be carried out by a qualified arboriculturalist. Every five years a detailed inspection and management plan should be undertaken by a qualified arboriculturalist.

## **8 Woodland Summary Report**

- 8.1 There are twenty two areas highlighted as woodland areas within the report and most are in good condition, with all trees of significant risk highlighted.
- 8.2 This report provides an overview of the woodlands within the site, their predominant species, age and condition and their estimated areas.
- 8.3 The woodlands have been assessed and it is apparent that detailed surveys are required to prescribe thinning works etc. for the correct future development of these areas based on the objects of management.
- 8.4 A complete schedule of woodland areas inspected is given at Appendix 2.

### Woodlands – Recommendations

- 8.5 It is recommended that a detailed woodland survey be commissioned for the areas highlighted within Appendix 2 Woodland Schedule. This should include species, age, stocking densities, woodland use, timber quality etc. and provide a detailed plan of operations for maintaining the woods.
- 8.6 Bi-annual inspections of all woodland areas should be carried out starting in 2007.

### 9 Plan of Operations

- 9.1 The detailed plan for the first five years for amenity trees is given at Appendix 3. The basic operational points are as follows:

#### **Amenity Trees**

- 9.2 Carry out felling and routine tree work within the first year as given under Amenity Tree Recommendations on page number 9. Those highlighted as more urgent should be undertaken first.
- 9.3 Phased removal of horse chestnut trees along golf course boundary to begin in year 1. Prepare planting plan and information to implement the proposed scheme and the subsequent maintenance of the new trees.
- 9.4 Identify locations for replacement of trees as they are removed.
- 9.5 Maintain newly planted trees as per planting specification.

#### **Woodlands**

- 9.6 Carry out felling and routine tree work within first year as given under Woodlands Recommendations as above. Those highlighted as more urgent should be undertaken first.
- 9.7 Commission woodland surveys to those highlighted within Appendix 2.

**APPENDICES**

**Appendix 1**  
**Amenity Tree Schedule**

**Five Year Plan of Operations**

## Tree Inspection Report and Management Plan

Tree Year	Amenity Trees –Years 2005 to 2009			
	All areas Note all costings are general estimates			
	General Work	New Trees	Ad Hoc work	Inspection Req.
2005-6	Carry out inspection on mature tree stock to ensure site safety. Report findings. Review development of semi-mature stock	Fell trees highlighted as requiring work within 3 months and of high risk within report. Plant replacement trees where possible	General maintenance not covered in initial report	Monitor trees after six months if no adverse weather conditions
Cost	£7000	£24000	£500	£500
2006-7	Carry out tree work as highlighted within safety inspections	Plant replacement trees where possible	New trees - check survival, replant as necessary, maintain weed free base	Carry out safety inspection of all areas. Review tree stock and review possible planting sites
Cost	£3000	£2000	£300	£2000
2007-8	Carry out tree work as highlighted within safety inspections	Plant replacement trees where possible	New trees - check survival, replant as necessary, maintain weed free base	Carry out safety inspection of all areas. Review tree stock and review possible planting sites
Cost	£3000	£2000	£300	£2000
2008-9	Carry out tree work as highlighted within safety inspections		New trees - check survival, replant as necessary, maintain weed free base	Carry out safety inspection of all areas.
Cost	£3000		£300	£2000
2009-2010	Carry out tree work as highlighted within detailed 5 yearly inspection		New trees - check survival, replant as necessary, weed maintain weed free base	Carry out detailed 5 yearly inspections of all areas
Cost	£3000		£300	£8000

Plan of Operations

Tree Year	Woodland Areas -Years 2005 to 2009 Note all costings are general estimates		
	Areas 790, 793, 797, 807, 823,824,1520, 1285	Areas 809, 822,1286,1175,1176, 1177, 1178	All areas
2005-2006	Fell trees highlighted as requiring work within 3 months and of high risk within report	Fell trees highlighted as requiring work within 3 months and of high risk within report	Commission detailed woodland surveys and report findings Carry out inspection on woodland area to ensure site safety. Report findings
Cost	£2000	£2000	£4000
2006-2007	No Work	No Work	
Cost			
2007-2008	Work as detailed in biannual inspection	Work as detailed in biannual inspection	Carry out bi-annual safety inspection of all areas
Cost	£500	£500	£1000
2008-2009	No Work	No Work	
Cost			
2009-2010	Work as detailed in biannual inspection	Work as detailed in biannual inspection	Carry out bi-annual safety inspection of all areas
Cost	£500	£500	£1000

**Appendix 4**  
**Maintenance Categories**

Maintenance categories numbers are defined as follows: -

### **A UNAVOIDABLE SERVICES**

- A1 Unavoidable tasks required to meet statutory obligations, which must be carried out to avoid an in-year legally enforceable notice (or to comply with a statutory time period). Failure to do so is liable to lead to prosecution and/or adverse publicity.  
Preventative maintenance tasks are to obviate the possibility of breaching statutory and health and safety regulations.
- A2 Unavoidable MOD mandatory tasks and unavoidable existing in-year contractual commitments.
- A3 Works required as a result of DHE Headquarters Initiatives/Directives.

### **B ESSENTIAL SERVICES**

- B1 Planned tasks which, if not undertaken, will result in unacceptable and disproportionate expenditure in the next FY.
- B2 Works services tasks required to improve efficiency with a pay-back period of less than 5 years.

### **C URGENT SERVICES**

Those services that it is necessary to undertake to maintain the value and utility of the estate. However, if not undertaken in the short term, there will not be an adverse effect.

### **D DESIRABLE SERVICES**

Works services which are necessary to maintain standards.

**APPENDIX 5**  
**PBA**  
**Tree Hazard/Risk Assessment Methodology**

## Tree Hazard/Risk Assessment

### Definitions

**Hazard** – anything that can cause harm

**Risk** – the chance, high or low, that someone may be harmed by the hazard

### Procedure

#### **1- Look for Hazards**

For trees – defects such as decay, split branches etc  
Assess the likelihood of harm actually occurring  
Ignore the trivial and concentrate on significant hazards which could result in serious harm or affect several people

#### **2 – Decide who may be harmed and how**

Consider the actual target area for highway trees; who - for highway trees – everyone in target area  
Consider location – e.g. schools  
how – depends on hazard – impact is most common one

#### **3- Evaluate the risks and decide whether existing precautions are adequate or more should be done**

Risk levels are high, medium and low, depending on the hazard, the likelihood of harm occurring (e.g. branch falling) and the nature of the harm (death, major injury, etc).  
See PBA Risk Assessment for examples  
Actions – for high and medium risk, what should be done to reduce risk, and when.

## Tree Hazard/Risk Assessment cont.

### 4 – Record your findings

Significant findings (i.e. **significant hazards**) of risk assessments must be recorded  
a 'suitable and sufficient' risk assessment will show that :

- 1- a proper check was made
- 2- you asked who might be affected
- 3- you dealt with all significant hazards, taking into account the number of people who could be involved
- 4- the precaution are reasonable, and the remaining risk is low

Keeping a written record is advisable

Reference – 'Five steps to risk assessment' H&SE

## Tree Hazard/Risk Assessment cont.

### Tree Inspections

**Identification of hazards** – straightforward to arboriculturalist

**Assessing risk** – calls for professional judgement. There is no standard or 'correct' system, though several 'systems' are available e.g. Ellison, 'Threats', ISA. They all involve allocation of scores which are multiplied to give a 'risk factor' which is in turn converted to High, Medium or Low. All have their merits and disadvantages, and all involve the making of judgements – there are no absolutes. The use of such systems is an individual choice – they can work well for some individuals but not for others.

**NB** Assigning numerical values to factors then finding an arithmetic answer does not remove the need for decision making on the assessors part.

### Reducing Risk

Note the following quotes:

*'The main question in assessing the need for remedial action is whether failure to carry out such action would leave an unacceptable risk to persons or property (targets). There may be a desire to 'play safe' by felling or topping every tree that conspicuously shows anything that might possibly be a defect. Such an approach is, however, inconsistent with the concept that risk should be assessed and kept within the limits of acceptability, rather than eliminated entirely. This concept is established in industry and in activities involving public safety (for example, transport), and is gaining acceptance on the part of tree owners and managers. If risk is quantified as far as can be achieved with available methods (see Chapter 5), appropriate decisions about remedial action can be taken.'*

Principles of Tree Hazard Assessment and Management D Lonsdale 1999'  
Section 6.1, p186

*'Statute law requires LA to take reasonable care; it does not require LA to maintain completely safe trees.'*

A defensible system of tree inspection for Local Authorities, D Dowson as reported By D H Kemp

For High and Medium risk, what action is needed to reduce risk to a low level?

**NB** Risk should be reduced, not eliminated!!!!

## **Tree Hazard/Risk Assessment cont.**

### **Records**

We need traceable records that show:

- date and time of inspections
- significant hazards have been noted
- risk as assessed
- remedial action was recommended where needed, with appropriate timing

It is NOT necessary to record every tree – use QA positional data records to show where you have been

Significant hazards – see it from the client/lay person's point of view – would they consider it a hazard?

Remedial action – high risk needs immediate report to whatever authority is in a position to take action. Phone calls – make notes at the time, follow up by e mail.

### **Client's Briefs**

These often omit risk assessment, in which case it should still be done, using client categories secondarily.

# Tree Inspection Report and Management Plan

## Tree Hazard/Risk Assessment cont.

location occupancy		High speed road		Low speed road		Cycle track		Footpath		Playground, school		Woodland/field	
		High	Low	Hig h	Low	High	Low	High	Low	High	Low	High	Low
<b>Hazard type</b>													
root, stem, branch or deadwood failure immanent	high energy	H	H	H	H	H	H	H	M	H	H	M	L
root, stem, branch or deadwood failure immanent	low energy	H	H	H	M	M	M	M	M	H	H	M	L
sight lines obscured		H	H	H	M	M	M	L	L	M	L	L	L
thorns or allergens		L	L	L	L	H	M	M	M	H	M	L	L
branches/foliage causing obstructions		H	M	H	M	H	M	H	M	X	X	X	X
Tripping hazard	trip only	X	X	X	X	M	L	H	M	H	M	L	L
Tripping hazard	compounde d	X	X	X	X	H	M	H	H	H	H	M	M
H=High Risk	X= Not Applicable				M=Medium Risk						L=Low		
High numbers of people exposed		Limited numbers of people exposed				Few people exposed							
Likely to occur immediately OR in the near future		Likely to occur at some time				May occur at some time							
Hazard is permanent OR persists for a long time OR occurs repeatedly		Hazard is intermittent OR occasional				Hazard is infrequent							
It could cause fatality OR severe injury (permanent incapacity).		It could cause major injury (three days or more absence from work)				It could cause minor injury							
The descriptions above are indicators, not exact definitions, and a risk level can be described by just one or two of the characteristics given. All must be considered on balance as, for example, any slope could lead to a fatality in extreme circumstance. The critical question then would be "is it likely to occur?"
