

# Free PID Awareness Workshops

- What does a PID measure? Is it just VOCs? Can it measure other gases?
- What does "Ionisation Potential" Mean?
- What will a PID not measure?
- What is a "Correction Factor"?
- How does a PID work?
- Why are there different PID lamps?
- Can you measure methane with a PID?
- Why use a PID instead of an explosive gas LEL monitor?
- Why is a PID an excellent choice for some compounds, but only a crude leak detector for others?

**A Free-of-charge workshop** covering the operation and use of PIDs is available to you **NOW** and will answer all the above questions and more.

We will come to your site and show you and your colleagues the use and operation of PIDs.

This is not a sales visit, and you don't have to have bundles of our instruments to qualify. We want everyone to understand how PIDs work, and what they can be used for.

Shawcity *understands* PIDs

We have the UK's number one PID hire service and we sell & service more PIDs than anyone else. In order to maintain our position we want everyone to understand how PIDs can make work easier, simpler and quicker.

The workshop presentation takes 1 to 1½ hours and consists of informative talk and PowerPoint presentation from our PID experts. We *understand* your application, be it environmental monitoring, solvent measurement, leak detection or whatever and will gear our presentation to your needs.

Our free workshops are so popular there is a bit of a waiting list, so the sooner you contact us the faster we will be able to bring you our expertise. And we might already have a session in your area soon, so you may be able to jump the queue!

**Call Natalie on 01367 246963 to book your PID awareness workshop, or email [natalie@shawcity.co.uk](mailto:natalie@shawcity.co.uk)**

**IOSH, BOHS & CIEH Members** – This program can count towards your CPD Portfolio
