KONICA MINOLTA'S NEW 240f MULTIFUNCTIONAL IS A VERSATILE PERFORMER

Konica Minolta has launched the 240f multifunctional system. For maximum flexibility the 240f can be used as a desktop copier, fax, network printer or colour scanner. A large touch screen display provides easy operation. Authenticated users can set up 'My MFP' settings to provide shortcuts via the display, for preferred default settings and frequently used operations.

With an automatic document feeder holding up to 80 originals, the 240f produces 24 A4 copies a minute with a first copy out speed of just six seconds. Using the duplex print facility the 240f produces 13 double sided prints a minute.

THE GREEN GRASS OF HOME DOESN'T GROW IN THE OFFICE

One in three office workers has a lazy attitude when it comes to looking after the environment at work, a new survey has revealed ahead of Green Office Week 2010.

The national survey, conducted by Avery, has found that despite huge efforts to make people aware of the environmental and economical impacts of their actions, 36% of the UK admit nothing is stopping them from doing their bit, but they just don't bother!

Only 11% of us consciously choose environmentally friendly office supplies in the first place, and so the second annual Green Office Week, held between Monday 26th April and Friday 30th April, is encouraging people to turn over a new leaf.

The week will encourage offices to raise awareness amongst colleagues, help review purchasing habits, devise an action plan for the future, and celebrate the excellent achievements of people who consider the environment at work.

Log online to the interactive website at www.greenofficeweek.eu to download free resources.

HAVE YOU HAD YOUR AIR CONDITIONING TESTED UNDER F GAS THIS YEAR? WHAT YOU MAY NOT KNOW ABOUT AIR CONDITIONING UNITS

- Did you know that you now have to legally have your air conditioning unit serviced under F Gas regulations?
- Depending on the size of your units, you may also require your unit to be inspected (in most cases before Jan 2011.)
- Servicing can also increase the efficiency of your unit, ensure reliability and validate your manufacturer warranty.
- You can upgrade older R22 units for more energy efficient ones, and get financial support through the Enhanced Capital Allowances (R22 gas has now been phased out.)
- Choose the correct setting for your units, don't over run your unit - if it isn't coping, it could be due to insufficient units or kw for your requirements.
- The majority of units now provide heating as well, which in most cases is cheaper to run than a boiler.

DX Electrica provides both electrical and air conditioning inspections, maintenance, repairs and installations within the London area. We work with all business sizes, and industries. For downloadable fact sheets visit www.dxelectrica.net or call 02073757145 for a free quotation.

SPITFIRE SIP TRUNKS COMPLETE TESTING WITH SARK UCS

Spitfire, the leading Internet Telephony Service Provider, has completed interoperability testing and accreditation for its SIP Trunk service with the Sark UCS Asterisk-based PBX range, produced in the UK and marketed by ProVu Communications.

Designed as an ISDN30e and ISDN2e replacement, Spitfire's SIP Trunk typically offers business quality secure telephony at up to 50 percent less than the monthly rental cost of an equivalent ISDN service. Spitfire can provide a direct connection between the customers' premises and Spitfire's core network over the UK's widest range of SDSL, ADSL or Ethernet circuits, including Bonded xDSL connections. www.spitfire.co.uk

FOAMCLENÉ - PUMP ACTION

New from AF International Foamclene is a powerful foaming cleaner that removes grease and grime from a variety of surfaces. The solution is non-flammable and non-hazardous. The 100% recyclable pump action bottle is suitable for up to five refills (using FCL01L) and contains no propellants, making it an all round environmentally friendly solution. Use with AF Safecloths or Super-Cloths.
