

SEMINAR TITLE

'ROOFLIGHTS - CDM AND THE NEW BUILDING REGULATIONS PART L AND HOW THEY AFFECT ROOFLIGHTS'

Duration - 45 minutes

Contents

This N.F.R.C (National Federation of Roofing Contractors) CPD accredited seminar fully explains the new Building Regulations Part L that came in to force on 6th April 2006 in relation to rooflights and the affects that the Regulations have with regards to solar overheating, daylighting etc.

It goes on to explain how rooflights have been developed to meet the new Building Regulations Part L England, as well as the CDM Regulations that came on board in the early 90's. There is a lot of detail relating to rooflights which will be of interest to architects and specifiers as well as clients.

The seminar endeavours to give the listeners a full picture of their options in relation to using natural light in buildings thereby not only saving energy but also reducing carbon emissions.

From experience we know that this seminar normally over runs due to the 'question and answer' session both in and after the seminar has been presented.

Supporting Literature

All attendees of the seminar will receive supporting literature covering the points raised as well as case studies and relevant information relating to the rooflights.

All attendees will also receive a certificate of attendance relating to this seminar.

Venues

The seminar can be held in-house.

Requirements for the Seminar

One 240 volt, 13 amp plug socket.

Availability

Notice will be required to book seminars. The seminars can be carried out within or outside of working hours as required. Please note that demand is such that at least two months notice will be required for seminar bookings.
