

Alidomes

Whether you need a covered stage for a DJ at a firework display, a celebrity Christmas Lights "switch on", a Local Authority festival or are staging a concert with a leading rock group, the Alidome range will have a system to suit your requirements.

Since their launch in 1997, the Alidome range has continued to grow in popularity with a wide range of clients including many Local Authorities. In response to customer demands, the range has expanded into four widths (4.88m, 6.1m, 8.23m and 12.2m) with each size available in a number of modular depths from 2.44m to 14.64m**

In addition to being used as performance stages in their own right, the smaller 4.88m wide Alidomes can also be used as matching PA Wings and Front of House positions where the larger Alidome systems are being used as the main stage.

System Features

**minimum depths apply to the larger width systems

- Available in a range of system widths
- Designed to accommodate uneven ground with up to 1m of adjustment available over the footprint of the structure
- Stage heights from 1m to 2m possible
- Blue PVC covers available throughout the range with clear covers and silver/black covers available for some sizes
- Structures 6.1m wide and above are normally supplied with a battery powered anemometer to monitor wind speed
- Structures of 6.1m wide and above feature a front peak overhang to roof.
- 12.2m wide Alidome features in built lighting support grid.
- The Alidome roof canopy straddles the stage with the roof framework extending to ground level.
- The flat back design allows the full width of the stage to be utilised with no loss of space at the rear corners.
- The canopy design prevents rainwater sheeting off the roof onto the outside edges of the stage and then running back into the performance area.
- Lighting payloads of up to 500kg per 2.44m deep bay (up to 2500kg on a 12.2m wide x 12.2m deep structure)
- Can be fitted with ground stakes when sited on grass or kentledge when used on hard standing
- Step access normally sited to stage rear
- Options also include loading or wheelchair access ramps and stage thrusts
