

Stage Equipment

Looking for greater freedom in stage and set design without resorting to expensive and time consuming made up pieces or specials?

With a standard range of over 75 different shapes and sizes of stage decks, the Alistage system offers users what is possibly the widest choice of any system, allowing for complex designs, unusual shapes and odd sizes to be catered for from stock equipment.

In addition to standard plywood decked stages, we can also offer decks fitted with punched and pierced steel planking and a range of stages fitted with Perspex tops both of which can be under-lit to achieve spectacular effects.

From dry hire to full erect and dismantle, equipment is supplied with layout drawings, assembly instructions, risk assessments and method statements as required.

A full design service and CAD facility is available, and we are happy to work from full design drawings, just a concept, or anything in-between.

Already widely used for all types of television, theatre, film and exhibition work the number of converts to the Alistage system is growing daily.

So whether you need 600 decks to floor an exhibition hall, a tiered stage to fit an irregular space, a Perspex topped circular stage or a single deck for a speaker's platform why not give us a call.
