

## **Total Barrier**

The Alistage Total Barrier is an all aluminium front of stage pit barrier system that features an extruded anti-slip heavy duty ramped nose, reduced height support struts and integral safety steps.

Quick fit shoot bolts are fitted for ease and speed of erection with an interlocking feature incorporated between the barrier floor frame and vertical mast to prevent uplift. Units bolt together to ensure rigidity in use.

A full range of barrier sections are available including internal and external fixed angles, Gates, Flexi's and Snake Gates all of which have been structurally tested by Lloyds British to loads in excess of the 6kN/m proof test required by BS EN 13200:3, with the standard 1m section tested to 7.5kN/m.

Whilst barrier hire stock is currently held in self colour aluminium, sale equipment is available with the option of powder coating in a range of colours.

With safety and crowd management continuing to be increasingly important factors in event planning and licensing approval can you afford to consider anything less?
