ds32.net

In addition to supporting Windows 9x, NT, 2000, XP and Browser client, ds32.net provides secure web-based access to the DataStore®32 information repository. DataStore32 is a Microsoft NT/2000 based server application. With ds32.net installed, it acts as a web-server, using Microsoft Internet Information Server (MIIS) with standard web browsers (Internet Explorer v5 and above). The DataStore32 server may be located on a different machine or on the same machine as the MIIS server.

All forms of documents (such as; scanned images, computer generated output and cheques, e-mail, office, for example) may be retrieved within seconds. This also provides users with the capability to deliver invoices and statements electronically and to provide report distribution capability directly from the DataStore32 repository.

Immediate desktop access, using browser or standard Windows clients, from a single source, enables Customer facing employees to respond to requests in a matter of seconds, or to complete investigation or reconciliation tasks in minutes. With the distributed, scalable architecture of DataStore32, organisations are able to take full advantage of the radical shift towards location independent, mobile computing. Applications may now be deployed with minimal cost, quickly and irrespective of location.

ds32.net is totally customisable, providing the capability to project the corporate identity of the Customer, to its Users and to its Customers - or to reflect the identity of the Customer as an extension of their web-site. Simple "front-end" changes, to full customisation.

The latest generation of ds32.net, exploits XML & SOAP and Microsoft's .net architecture, to provide even greater flexibility and enhancing the customisation capabilities - from simple "front-end" changes, to full customisation.

Benefits of ds32.net include:

- *Remote access to archived information, anywhere in the world, via the internet.*

- *Fast efficient deployment*

- *Fast & secure retrieval of documentation*

Leading to:

- *Increased Productivity*

- *Enhanced Business Processes*

- *Improved Customer Service Levels*

Hitec (Laboratories) Ltd is a proven market leader, engaged in the development, delivery and subsequent professional support of Electronic Information and Document Management Solutions. More than 500 organisations have already installed Hitec's leading DataStore EDM and integrated imaging solutions. These organisations are now reaping many benefits, such as reduced operating costs, enhanced security controls, simultaneous or concurrent access to the same information, better information management and improved efficiency within a department / organisation. Customers also benefit from greatly improved disaster recovery and contingency planning.
