Panacea Report Packs

Optimise the value of your organisation's Sage CS/3, Sage Line 200 or Sage Enterprise data - with immediate effect!

Developing and delivering an accurate management information pack is one of the most time consuming activities for all decision makers in the modern enterprise and yet one of the most important to get right first time.

In order to facilitate a fast roll out of a fully functional, multi-dimensional management pack, Panacea have developed a series of pre-designed reporting packs based around the powerful Business Objects BI toolset.

How do the Report Packs work?

Each individual report theme is presented as a portfolio to give the Decision Maker a view of the specific area of concern from summary, drilling through to detail transactional analysis and featuring different dimensional analysis at each level.

For example, the **Aged Debtors Report** is viewed as summary for Company through analysis of aging parameters by **currency**, by **product**, by **invoice** and by **customer**. Reports are defined in both graphical and analytic forms to aid fast trend analysis and exception querying.

All reports are designed to be as database efficient as possible ensuring the infrastructure overhead is minimal. These 'off the shelf' packs cover the following areas of the business - **finance**, **sales & marketing**, **procurement**, and **inventory control**.

What are the benefits?

- Immediate return on investment
- Reduce training costs
- Increase the benefits of your Business Objects implementation - quickly and efficiently.

What are the system requirements?

ERP application: Sage CS/3, Sage Line 200, Sage Enterprise

Database: C-ISAM, Oracle, Informix On-Line, SQL

Operating Environment: UNIX, Microsoft Windows NT / 2000.
